

Vaccines During Pregnancy

Three vaccines during pregnancy help protect pregnant patients and their babies from illness.

- Tetanus, diphtheria and pertussis (Tdap)
- Respiratory Syncytial Virus (RSV)*
- Flu

Administering the flu and Tdap vaccines also helps improve your performance on the Prenatal Immunization Status (PRS-E) HEDIS[®] measure.

*Abrysvo[™] is the only RSV vaccine approved for use during pregnancy.

HEDIS[®] is a registered trademark of the National Committee for Quality Assurance.
